FROM RESPONSIBLE SOURCING TO A NATURE POSITIVE AGENDA

- Conservation and restoration have long been viewed as the responsibility of charity and donor-funded efforts. **It is time for change.**
- Amongst leaders in sustainability, corporate commitments are shifting towards proactive efforts, focused on becoming forest and nature positive and net zero.
- Large-scale, transparent, and impactful conservation and restoration efforts require structural change if businesses are to fully deliver on such commitments.
- To date, we have been missing a mechanism that translates progressive leadership on these issues into action.

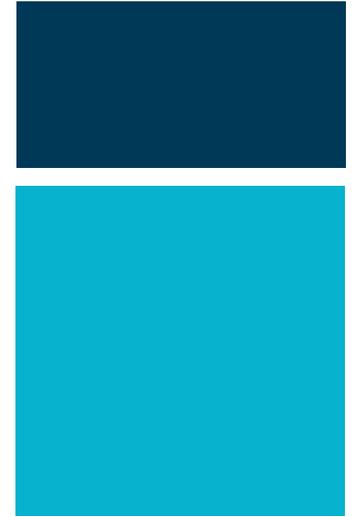

THE RIMBA COLLECTIVE: THE FOUNDING AND DEVELOPMENT PARTNERS

Starting in early 2020, we set out to create a new solution to some fundamental challenges:

- **How can businesses go beyond** their current sustainability commitments and deliver on a nature positive agenda?
- **How can we better integrate** conservation finance into business operations?
- **How can we ensure impacts** are credible, verifiable, and scalable and long-lasting?
- **How can performance-based mechanisms** help deliver the needed impact?
- **How can we connect** supply chains through shared responsibility?

THE RIMBA COLLECTIVE: TOWARDS NATURE- POSITIVE SUPPLY CHAINS

Private sector-led, scale-able mechanism for conservation finance.

Integrates equitable sharing of responsibility and collective action between, and within, supply chain tiers.

Scale of contribution payments is linked to production and procurement of oil palm products.

A portfolio of high-quality, independent projects focused on: **forest, peatlands, protection of biodiversity, and community livelihoods.**

WHY IS THE RIMBA COLLECTIVE DIFFERENT?

Rimba collective is aiming to be the largest private sector-led conservation initiative in South East Asia.

We are initially targeting:

500.000ha of conservation and restoration area

25 years of financing secured for conservation projects

US\$ 1 billion of conservation finance

Built for all parts of the supply chain to address numerous sustainability commitments:

No Deforestation, No Peat, No Exploitation (NDPE)

Carbon and climate neutrality targets, including net zero and Science Based Targets

Forest Positive Coalition of Action goals

Sustainable Development Goals (SDGs)

Hectare-based conservation targets

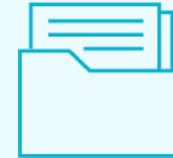

WHY IS THE RIMBA COLLECTIVE DIFFERENT?

Performance-based payments with independently verified conservation outcomes

Long-term financing supporting long-term delivery

Portfolio approach

Claims tied to demonstrated impact

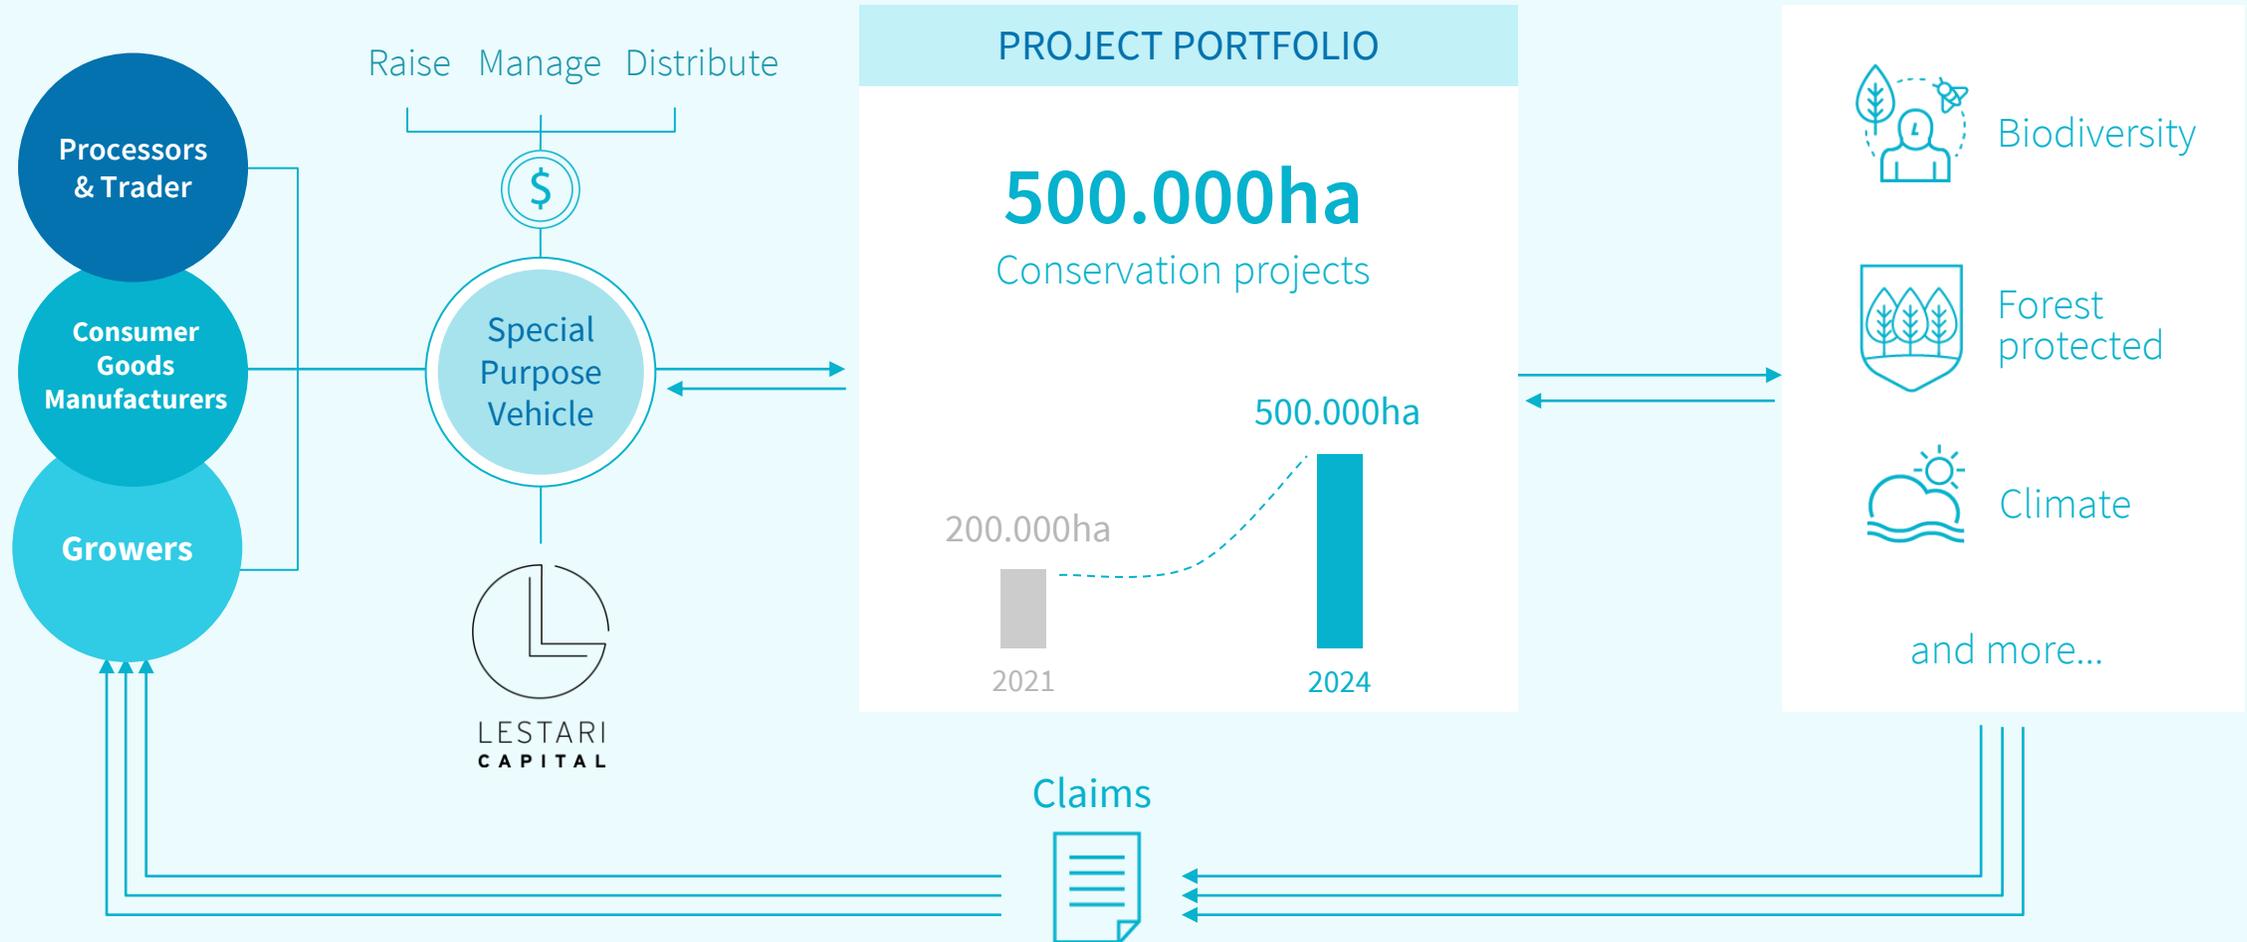

Procurement-integrated payments into business as usual

Responding to real-world project needs

HOW DOES IT WORK?

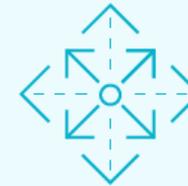

THE RIMBA COLLECTIVE IS TRULY INNOVATIVE ON SEVERAL FRONTS:

A new benchmark
for conservation
and restoration

Transparent
monitoring
and reporting

Scalable model
for bigger impact

Changes the narrative
on how conservation
is financed

Integrates conservation
and restoration into
business

Aligns with national
government

TIMELINE

SCALE UP CONSERVATION IMPACT | TO CREATE RESPONSIBLE, NATURE POSITIVE SUPPLY CHAINS
